Notes:

<sup>(1)</sup>Wells are limited to 50% of their maximum capacity for reliable supply when well/pump capacity is the limiting factor. Springs and surface water supplies are equal to their respective maximum capacities.

<sup>(2)</sup>Reliable water supply is considered to be equal to calculated water use.

<sup>(3)</sup>Has contract with WCWCD for additional water supply

<sup>(4)</sup>Reliable well supply is calculated based on Santa Clara's 24.7% ownership of wells in Snow Canyon Compact yield.

<sup>(5)</sup>Reliable well supply is calculated based on St. George's 63.3% ownership of wells in Snow Canyon Compact yield.

However, St. George has more well water rights available for additional supply, if needed. <sup>(6)</sup> See Table 4-2
